SUMMARY

Experienced Backend Engineer skilled in Node.js, Java, Spring Boot, Kafka, Docker, and cloud-native microservices.

EDUCATION

Indian Institute of Technology (ISM), Dhanbad
Bachelor of Technology in **Computer Science and Engineering** 2015 – 2019

TECHNICAL SKILLS

- **Languages**: JavaScript, TypeScript, Java, Python, C/C++, HTML, CSS
- **Technologies and DBs**: Node.js, ExpressJs, SpringBoot, Fastify, NestJs, MySQL, MongoDB, AWS, GCP, Kafka
- **Tools**: Redpanda, Openshift, Kibana, 3scale

WORK EXPERIENCE

Speridian Technology (Client: EmiratesNBD), Bengaluru June 2025 – Current
Senior Software Engineer

- **Architected and delivered a scalable Limit Management System** supporting real-time transaction controls across distributed banking systems, enabling dynamic configuration of limits (transfer, withdrawal, payments) with RBAC and high availability.
- **Led design and implementation of the Smart-Pass** security service, enabling banking operations teams to dynamically configure customer transaction controls across all channels, with support for multiple authentication mechanisms (UPI, OTP) and real-time enforcement.
- **Drove end-to-end execution of TRUEID OCR Framework** from ground up for automated KYC document scanning and validation, processing **10,000+ documents daily** with **98% accuracy rate**; framework subsequently adopted company-wide as standard for all KYC document processing across **15+ banking products**.
- Integrated TRUEID OCR with end-to-end KYC and customer on-boarding pipeline, reducing manual document verification time by **85%** and improving customer on-boarding completion rate from **72% to 94%**.
- Engineered secure document handling system with encryption at rest and in-transit, ensuring compliance with UAE Central Bank regulations and international banking security standards.
- Designed and implemented multi-tenant configuration service allowing business teams to self-serve limit modifications without technical intervention, reducing deployment cycles from **2 weeks to 2 hours**.
- Developed comprehensive monitoring and analytics dashboard for limit management system, providing real-time visibility into transaction patterns, failure rates, and customer behavior insights.
- Implemented distributed tracing and logging across OCR pipeline for end-to-end visibility and debugging, reducing mean time to resolution (MTTR) for document processing issues by **70%**.

Chingari, Bengaluru July 2024 – Feb. 2025
Senior Software Development Engineer

- Strengthened application security by fixing global JWT vulnerabilities and enforcing session-limiting mechanisms, preventing unauthorized access and reducing security incidents by **100%**.
- Owned architecture and end-to-end delivery of reward system from scratch, increasing user engagement by **40%** and retention by **35%** through gamification.
- Enhanced transaction analytics system with real-time insights and historical tracking, enabling data-driven decision-making for business teams.
- Launched in-app currency system enabling exclusive features (free WhatsApp integration), improving onboarding completion by **25%**.

Biz2Credit Pvt. Ltd., Noida June 2023 – June 2024
Software Development Engineer

- Owned architecture and end-to-end delivery of multi-tenant service for automated client report generation using JSON mapping, reducing manual reporting work by **80%** and processing **500+ reports daily**.

- Developed custom JSON-to-XLSX converter, accelerating data processing by **3x** and optimizing reporting workflows for **200+ enterprise clients**.
- Created reusable npm modules for structured logging and Jaeger SDK integration, boosting team debugging efficiency and reducing production incident resolution time by **50%**.
- Implemented API middleware layer for seamless third-party integrations (payment gateways, banking APIs), improving system reliability and enabling rapid integration of **30+ external services**.
- Refactored legacy JavaScript codebase to TypeScript, improving code maintainability and reducing runtime errors by **45%**.

Saveo Pvt. Ltd., Bengaluru Jan. 2022 – May 2023
Software Developer

- Migrated infrastructure from AWS to GCP, achieving **40% cost reduction** and reducing latency by **25%** for millions of daily transactions.
- Deployed zero-downtime deployment infrastructure using Docker and Kubernetes, improving system availability to **99.98%** and enabling daily feature releases.
- Implemented Elasticsearch from scratch for product search capabilities, reducing query response time from **2.5s to 500ms** and enabling complex aggregations.
- Optimized backend systems for multi-order digital payment processing and customer map views, enhancing transaction speed and user experience.

Publicis Sapient, Gurugram Feb. 2021 – Dec. 2021
Associate Technology

- Led A/B testing initiatives for international client, optimizing user experience and increasing conversion rates by **18%**.
- Enhanced software performance through code architecture refinement and critical bug resolution, reducing application crash rate by **60%**.
- Mapped data integration requirements, ensuring seamless information flow between business and technical stakeholders.

SaddaCampus, Dhanbad Aug. 2018 – July 2020
Founding Member

- Developed comprehensive technical strategy aligned with business objectives and architected scalable platform supporting **50,000+ users**.
- Built and mentored engineering team from **0 to 8 developers**, establishing coding standards, architectural patterns, and agile methodologies.
- Designed microservices architecture supporting course management, user authentication, and content delivery.

PROJECTS

- **Real-Time Event Processing System** — *Kafka, Node.js, Distributed Systems*
  Designed and implemented an event-driven architecture using Apache Kafka to process high-throughput real-time data streams. Achieved fault tolerance and horizontal scalability, enabling the system to handle spikes of **10k+ events/sec**.
- **Scalable API Gateway** — *Node.js, Microservices*
  Built a lightweight API gateway that provides authentication, rate limiting, request routing, and response aggregation for a suite of microservices. Improved overall system security and reduced latency by **15%** through intelligent caching.

KEY ACHIEVEMENTS

- **Banking Sector:** Built limit management and KYC automation systems processing **10,000+ daily transactions** for EmiratesNBD with **98%+ accuracy** and **85% reduction** in manual effort.
- **Team Leadership:** Built and scaled engineering teams while establishing best practices in microservices architecture and SOLID principles.
- **Scalability:** Designed multi-tenant systems supporting **500+ enterprise clients** and millions of daily transactions.
- **Security:** Eliminated critical JWT vulnerabilities and implemented role-based access control across multiple production systems.
